1 Purpose

This document defines the visual language, interaction principles, screens, and user experience goals for HeeraMon.

The goal is not to specify pixel-perfect layouts, but to provide sufficient guidance so that frontend implementation remains consistent, minimalistic, and aligned with the product philosophy.

This document serves as the textual equivalent of early wireframes.

2 UX Philosophy

HeeraMon should feel:

- calm;
- intelligent;
- minimal;
- premium;
- conversational;
- trustworthy.

The interface should reduce complexity rather than expose it.

Users should feel that:

“I am talking to a thoughtful assistant that understands what I want.”

rather than:

“I am filling a complicated recruitment form.”

3 Design Principles

3.1 Minimalistic

Only important information should appear.

Avoid:

- dashboard overload;
- excessive menus;
- unnecessary metrics;
- clutter.

Complexity should remain inside the system.

3.2 Conversational First

Conversation is the primary interface.

Structured controls may exist where useful, but should support conversation rather than replace it.

Examples:

- edit preference button;
- approve application button;
- notification list;
- saved jobs.

3.3 Progressive Disclosure

Show information gradually.

Example:

Initial:

“I found a close match.”

Expanded:

- salary;
- location;
- commute;
- trade-offs;
- company information.

The user should not be overwhelmed.

3.4 Explainability

Important recommendations should include:

- what fits;
- what does not fit;
- what is unknown;
- why the job was shown.

3.5 Human Approval

Consequential actions should always include review steps.

Examples:

- application review;

- profile update;
- external submission.

4 Visual Identity

4.1 Theme

HeeraMon should appear:

- clean;
- modern;
- premium;
- calm.

Preferred style:

- white background;
- black text;
- subtle gray elements;
- minimal accent colors;
- soft shadows;
- moderate spacing;
- rounded corners.

4.2 Typography

Preferred:

- Nunito
- modern sans-serif fonts

Characteristics:

- readable;
- friendly;
- professional.

4.3 Components

Suggested style:

Buttons:

- black background + white text
- white background + black border

Cards:

- white
- black border or subtle shadow

Corner radius: approximately 10–12 px

Animations: subtle and purposeful

5 The Bird Character

The bird is HeeraMon's personality layer.

The bird should:

- feel helpful;
- feel calm;
- avoid becoming distracting;
- support conversation.

Possible interactions:

- entering the screen during onboarding;
- small wing movement;
- speech bubble;
- subtle reactions.

The bird should never dominate the interface.

The user comes for jobs, not animation.

6 Main Screens

6.1 Screen 1 — Landing / Home

Purpose: Introduce HeeraMon.

Contains:

- HeeraMon bird
- greeting
- primary text input
- sign in option

Example:

“Describe your dream job and I will find it for you.”

6.2 Screen 2 — Conversation View

Purpose: Main interaction area.

Contains:

- conversation history
- user messages
- HeeraMon responses
- suggestion chips
- notifications where relevant

This is the primary product surface.

6.3 Screen 3 — Preferences View

Purpose: Allow visibility and editing.

Sections:

- hard requirements
- soft preferences
- learned preferences

Users should understand:

- what HeeraMon knows;
- what HeeraMon inferred;
- what is uncertain.

6.4 Screen 4 — Opportunity View

Purpose: Display a job.

Contains:

- title
- company
- salary
- location
- work arrangement
- trade-offs
- explanation
- actions

Actions:

- save
- reject
- investigate
- proceed

6.5 Screen 5 — Job Detail View

Purpose: Deep inspection.

Contains:

- description
- requirements
- benefits
- application details
- HeeraMon explanation

6.6 Screen 6 — Notification Center

Examples:

- new match;
- close match;
- application ready;
- search updates.

Notifications should remain concise.

6.7 Screen 7 — Application Review

Purpose: Human approval.

Contains:

- CV;
- profile information;
- application answers;
- editable fields;
- approve button;
- cancel button.

Approval should be deliberate.

7 Empty States

Examples:

No jobs:

“I’m still searching. I’ll let you know when I find something promising.”

No preferences:

“Tell me what kind of work you want.”

No notifications:

“Nothing important right now.”

Empty states should feel natural rather than mechanical.

8 Loading States

Examples:

Searching:

“Looking for new opportunities...”

Analyzing:

“Comparing this opportunity with your preferences...”

Preparing application:

“Preparing information for review...”

Users should understand what HeeraMon is doing.

9 Error States

Examples:

Source unavailable:

“I couldn’t reach one of my job sources. I’ll try again later.”

Missing information:

“This company did not provide salary information.”

Application failure:

“The application could not be completed. Nothing was submitted.”

Errors should be:

- understandable;

- recoverable;
- transparent.

10 Accessibility

The interface should consider:

- keyboard navigation;
- readable contrast;
- mobile use;
- screen sizes;
- responsive layouts;
- reduced motion preferences.

Accessibility should be considered from the start.

11 Suggested Screen Layout

The following conceptual layout guides the primary conversational interface. It is illustrative rather than a rigid constraint.

```

+-----+
| HeeraMon Logo                               Notifications |
+-----+
|
|                                     [Bird]
|
| "Describe your dream job
| and I will find it for you."
|
+-----+
| Conversation Area
|
| User: I want AI/ML, 40k, short commute.
|
| HeeraMon: I found a close match...
|
+-----+
| [ Text Input ..... ]
+-----+
| Quick Actions
| Preferences | Saved Jobs | Notifications
+-----+

```

Key layout intentions:

- Header remains light and unobtrusive.

- Conversation occupies the primary visual space.
- Input is always reachable.
- Quick actions support, rather than replace, conversation.
- The bird appears as a calm presence, not a dominant element.

12 Boundaries

The initial release does not require:

- complex dashboards;
- analytics panels;
- excessive gamification;
- many settings pages;
- highly detailed visual customization;
- heavy animation systems.

The interface should remain:

simple → conversational → informative → trustworthy

13 Success Criteria

The UI/UX is successful when users can:

1. Understand HeeraMon quickly.
2. Describe preferences naturally.
3. View and modify preferences.
4. Understand job recommendations.
5. Recognize trade-offs.
6. Make decisions easily.
7. Review applications confidently.
8. Feel that HeeraMon is assisting rather than complicating the process.

Core principle: HeeraMon should feel less like a recruitment portal and more like a thoughtful companion helping users navigate their career decisions.

14 Document Control

Version	Date	Author / Role	Changes
1.0	September 30, 2026	Product / Engineering	Initial release

Approval: This document defines the UI/UX principles and screens for HeeraMon. All subsequent design and implementation work must remain consistent with the principles stated herein.

HeeraMon flies to help people find job that fits not only their career, but the life they want to live.
